

Impact of Human Activity on the Geological Environment EUROCK 2005: Proceedings of the International Symposium EUROCK 2005, 18-20 May 2005, Brno, Czech Republic

This work focuses on the impact of human activity on the geological environment and contains over 100 papers dealing with laboratory and field research investigations in geomechanics, geoengineering and mathematical modelling. Topics covered are grouped into eight main themes: response of the rock mass to human impact; slope stability; field research; laboratory research; stability of underground openings; mathematical modelling; stress measurements, and mineral and rock disintegration.
