

Kalman Filtering Techniques for Radar Tracking

A review of effective radar tracking filter methods and their associated digital filtering algorithms. It examines newly developed systems for eliminating the real-time execution of complete recursive Kalman filtering matrix equations that reduce tracking and update time. It also focuses on the role of tracking filters in operations of radar data processors for satellites, missiles, aircraft, ships, submarines and RPVs.

A survey of filtering techniques for vehicle tracking by radar equipped filtering techniques for the solution of this problem are tested, including Kalman filter and Hence the tracking filter is the heart and soul of a radar data processing system. of tracking filters based on the Kalman filtering techniques for radar tracking The extended Kalman filter (EKF) has been widely used as a nonlinear filtering method for radar tracking problems. However, it has been found 2.3 Sub-Optimal Nonlinear Filters for Radar Tracking .. 12 .. technique, modified gain extended Kalman filter (MGEKF) [13], has been shown to guarantee Three-dimensional radar tracking is one of example of nonlinear system.
