THE STANDARD VOLUME 60

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: ...magnate, that in order to maintain the high speed required by the American public, the standard gauge must be increased to six feet or electricity used for motive power, comes a petition from several representative Chicago business men to the presidents of the New York Central and the Pennsylvania roads asking that the running time of their fast trains between New York and Chicago be increased from eighteen to twenty hours. The American railway accident record of the past few weeks would seem to show that something is radically wrong, and I am inclined to believe that the simpler solution lies in a reduction in speed and in the hours of the service of employes in responsible positions. More humane than the time-honored suggestion of London Punch that a director of the company be lashed to the cowcatcher of each locomotive. Two bad water losses, one at Beverly and the other at Fall River, have started up the sprinkler critics. In the first case, the members of the fire department decided that the alarm from the automatic was false and in the second no one seemed to know where the shut-off valve was located. In each case the equipment did what it was intended to do, and then the water ran until it was shut off. Nothing remarkable about it. Just a question of supply. If sprinklers open promptly and extinguish a fire, they have made good. The rest is left to human intelligence. I was asking a Boston agent regarding the qualifications of a certain young man this week. He said, Why I remember a number of years ago when this fellow was the office boy in a large office and went about delivering expiration notices, policies, etc. He hadnt been at it long before he began to bring in

applications on dwellings and furniture
which he had gotten by asking for the...
